

IGS Sweden — Senior Frontend Developer — HR Interview Preparation Guide

Position: [Senior Frontend Developer](#) at IGS Sweden AB

Purpose: Recruiter / HR screening (~30 min). Friendly, resume-focused, motivation and culture fit — not deep technical grilling yet.

Customize: Replace `[bracketed placeholders]` with your real details before the call.

1. Company Snapshot

Topic	Key facts to mention naturally
Who they are	IGS Sweden AB (Internet Global Services Sweden) — full-service IT agency founded 2007 , delivering software and digital services for B2B clients

Topic	Key facts to mention naturally
Focus industry	Digital content & entertainment — tailored products, ready-made solutions, and consultancy
What they build	Custom web/mobile products, off-the-shelf digital solutions, UX-driven interfaces for brands serving end consumers
Methodology	Design Thinking — Empathize → Define → Ideate → Prototype → Test
Services	Consultancy team, ready-made solutions, tailored development
Offices	Solna (Gårdsvägen 14, 169 70) — near Mall of Scandinavia, Tvärbana, Pendeltåg · Stockholm (Nybrogatan 59)
Team size	Small, growing team (~1–10 on LinkedIn; actively hiring frontend, backend, design, PM)
Tech context	Frontend: Angular , REST APIs · Backend stack (for context): Java 17+ , Spring , Kafka , Kubernetes , Spring WebFlux
Contact	hello@igssweden.com · jobs@igssweden.com · +46 8 271 035

One sentence you can use:

"IGS sits at the intersection of product engineering and digital experience — building Angular frontends for B2B clients in the content and entertainment space, with a Design Thinking mindset and a small team where senior developers shape architecture, not just tickets."

Useful links:

- [IGS Sweden website](#)
- [Job posting \(BambooHR\)](#)

2. IGS Culture & Design Thinking — How to Mirror Them

Theme	What HR listens for	Phrases to weave in
Design Thinking	User empathy, iteration, prototyping before big builds	"I validate with users before committing to architecture," "thin vertical slices"
Innovation & curiosity	Willingness to try new tools, improve process	"I ran a spike before adopting a new pattern," "I experiment, then standardize"
B2B for B2C experiences	You understand the end user matters even in B2B software	"Our client's customers need fast, polished UX — that's what we optimize for"
Small team ownership	Initiative, standards, mentoring — not waiting for a big org	"I defined frontend conventions because the team needed consistency"

Theme	What HR listens for	Phrases to weave in
Agile collaboration	Sprint rhythm, communication, code review culture	"daily standups, retros, transparent blockers"
Quality & craft	Performance, reusable libraries, maintainable code	"shared libraries," "code reviews that teach," "load time and interaction quality"

Strategy: For every behavioral answer, end with one culture link — don't force every theme into every answer.

3. Role Snapshot — What They Are Hiring For

From the [Senior Frontend Developer posting](#):

Responsibilities:

- Architect, design, and develop new features and components
- Build **modular layouts**, **reusable code**, and **shared libraries**
- Help define and maintain **technical standards** and best practices for the frontend team
- Monitor and optimize **frontend performance** — fast load times, smooth interactions
- **Experiment with new tools and frameworks** to improve development and product quality
- **Mentor junior developers** and conduct code reviews
- Participate in **agile ceremonies** — sprint planning, standups, retrospectives

Requirements:

- **3+ years** frontend web development (you have 10+ — position yourself as overqualified but motivated, not bored)
- Strong **JavaScript/TypeScript** and **Angular**
- **RESTful API** integration with backend services
- **SEO principles** and **web analytics** awareness
- Excellent **English** (written and spoken)
- Strong analytical, organizational, and time management skills
- Work independently and in a **fast-paced** team

Senior signal HR screens for: architecture mindset, mentoring, standards ownership, performance awareness, initiative — not just "I know Angular."

Backend context (useful for "full stack awareness" questions):

- Java 17+, Spring, SQL, Docker, Kubernetes
- Event-driven architecture (Apache Kafka), Spring WebFlux
- Security: OWASP, OAuth2
- Integrations with third-party providers (payments, game providers — relevant to entertainment domain)

4. Critical Logistics — Read Before the Call

The posting explicitly states: on-site in Solna, Sweden. No relocation support. No visa sponsorship.

This will likely come up early. Prepare your answer **before** the call — ambiguity here wastes everyone's time.

If you already have the right to work in Sweden (EU citizen relocated, permanent resident, etc.)

Answer:

Yes — I'm based in **[Solna / Stockholm / Sweden]** and can work **on-site in Solna** as required. I understand there's no relocation package, and that's fine because I'm already here.

If you are in Croatia (or elsewhere) and would need to relocate + work authorization

Honest answer (recommended):

I'm currently based in **Croatia**. I saw the role is **on-site in Solna** with **no visa sponsorship**. Before we go further — is there any flexibility for candidates who already have **EU freedom of movement** and could relocate self-funded, or is the no-sponsorship policy absolute even for EU nationals? I'm very interested in the role technically, and I want to be transparent about logistics early.

Why this works: Shows respect for their stated policy, doesn't waste 30 minutes, opens a door if they mean "no non-EU visa sponsorship" rather than "must already live in Solna."

If you cannot relocate to Solna

Be honest early. HR will appreciate it. Don't proceed hoping they'll change the policy.

5. Opening & Introduction

5.1 "Tell me about yourself"

Target length: 90 seconds.

Answer (customized for Oleh Pliuta — adjust if needed):

I'm a Senior Angular developer with **10+ years** of experience and **30+ delivered web and mobile applications** across fintech, healthcare, logistics, and e-commerce.

My focus is **Angular, TypeScript, and RxJS** at scale: modular architecture, shared libraries, REST and real-time API integration, and strong testing culture. Most recently at **[Current Company / Shipment Company]**, I built enterprise operational UIs for **1000+ daily users** — including an **Nx monorepo shared library**, performance optimization, and **NestJS** backend collaboration.

The work I'm most proud of is **[concrete impact — e.g., 14% faster load times through webpack tuning and modularization, shared library adoption across web and mobile]**. That required hands-on coding plus coordinating with backend, QA, and product.

I'm interested in IGS because you're a growing team building **Angular products for digital content and entertainment clients** — where UX quality and technical standards matter — and this role combines **architecture, shared libraries, mentoring, and performance**, which is exactly the senior IC work I want next.

5.2 "Walk me through your resume" / "Tell me about your current role"**Answer:**

In my most recent role at **[Shipment Company]**, I was Senior Front-End Developer on an **enterprise vessel logistics platform** — web and Android — used by **1000+ operational users** daily.

I owned **modular architecture for new modules**, contributed to an **Nx monorepo shared component library**, integrated with **NestJS** backends, and led a **performance pass** that cut load times by about **14%**.

Before that, at **Ergonized** for five years, I worked on a **B2B insurance quoting platform** (Angular, NgRx, Nx, Stripe) and a **supply chain visibility dashboard** with **WebSockets** and live maps — complex business flows and real-time data.

Across all roles, the common thread is **B2B enterprise software** where users depend on accurate, fast interfaces — which maps well to IGS's client-facing products in digital content and entertainment.

Tip: Pause after each role and ask *"Would you like me to go deeper on any of these?"*

6. Motivation & Company Fit

6.1 "Why IGS?"

Answer:

Three reasons.

First, the product domain. Digital content and entertainment is user-facing at its core — even when IGS builds for B2B clients, the end experience has to engage consumers. I enjoy frontend work where **UX, performance, and polish** directly affect how people interact with a brand.

Second, the senior scope. This isn't a ticket factory — it's **architect features, define standards, build shared libraries, mentor juniors, and optimize performance**. That's the kind of ownership I've been doing and want to continue.

Third, the team stage. IGS is a **small, growing agency** where a senior developer can shape how the frontend team works — conventions, review culture, library design — not get lost in a huge org. Your **Design Thinking** process also resonates; I prefer understanding users before over-engineering.

6.2 "Why this role specifically?"

Answer:

The posting emphasizes **Angular architecture, shared libraries, performance, and mentoring** — not just feature delivery. I've done exactly that: Nx monorepo libraries, webpack performance tuning, code review culture, and helping juniors with RxJS and testing.

I also appreciate that IGS values **experimentation with new tools** — I'm pragmatic about adopting what helps the team, not chasing hype.

6.3 "Why are you leaving your current role?" / "Why now?"

Answer (positive framing):

I've learned a lot in my recent roles — **[specific: monorepo at scale, enterprise ops UIs, mobile + web]**. I'm ready for the next step: a **product-focused team in Europe**, more **frontend leadership** (standards, mentoring, architecture), and work closer to **digital experience and entertainment** products.

IGS isn't a reactive application — I researched the company, the Solna team, and the tech stack deliberately.

Avoid: Criticizing manager, pay as the only reason, or vague "I need a change."

6.4 "What do you know about IGS?"

Answer:

IGS Sweden — Internet Global Services — is a **Stockholm-area IT agency** founded in **2007**. You help **B2B clients** in **digital content and entertainment** with consultancy, ready-made solutions, and tailored product development.

You combine **strategy, design/marketing, and customer experience** — and use **Design Thinking** to empathize with users, define problems, prototype, and iterate.

On the engineering side, you're building **modern web products with Angular** on the frontend and a **Java/Spring/Kafka** backend stack. You're actively growing the team — frontend, backend, design — and this role is **on-site in Solna**, which I understand is near Mall of Scandinavia and well connected by public transport.

6.5 "How would you contribute to our culture?"

Answer:

I'd contribute in three ways.

Standards and libraries: In small teams, inconsistency slows everyone down. I'd help maintain **shared Angular patterns**, review practices, and reusable components so new features don't reinvent the wheel.

Mentoring: I've done code reviews and pairing for mid-level developers — especially on RxJS, testing, and API integration. I'd raise the team's baseline, not just my own output.

User-aware engineering: IGS's Design Thinking mindset matches how I work — clarify the user problem, prototype, then build modularly. I bridge product/design conversations and implementation trade-offs.

7. Experience & Resume Deep Dive

7.1 "Describe your most relevant project for this role"

Use Project #1 (Shipment Company) as your primary answer. Full scripts in [Section 16](#).

Quick STAR (Shipment Company — Nx monorepo):

Situation	Enterprise vessel logistics platform — web and Android — 1000+ users , thousands of daily operations. Teams duplicated UI between web and mobile.
Task	Deliver modular architecture, contribute to Nx shared library , improve performance on data-heavy screens.
Action	Feature / UI / data-access libs, Nx boundary rules, web vs mobile adapters. Webpack pass: lazy routes, splitChunks, buildable libs, dynamic imports, bundle budgets. OnPush + virtual scroll on heavy screens.
Result	2 enterprise apps, 14% faster TTI , shared library adopted across teams.

IGS hook: "Same challenge as IGS — modular Angular, shared libraries, performance for users who work in the product all day."

7.2 "What's your experience with shared libraries / modular Angular?"

Answer:

I've structured Angular codebases with **feature libs**, **UI libs**, and **data-access libs** in an **Nx monorepo** — shared components used by web and mobile, with **boundary rules** so dependencies stay clean.

I treat libraries as **products**: clear APIs, Storybook or docs where useful, tests on shared code first — because one bug in a shared grid affects every team.

7.3 "What's your experience integrating with backend APIs?"

Answer:

Daily work — **RESTful APIs**, DTOs, error mapping, auth flows. I've integrated with **NestJS/Node** backends extensively; I also read **Java/Spring API docs** comfortably and focus on **contract clarity** — shared types where possible, defensive UI error states, idempotent actions on payments or irreversible operations.

At IGS, I'd collaborate closely with the Java/Spring team on API shapes, pagination, and OAuth2 flows — frontend validates for UX, backend validates for authority.

7.4 "What's your experience with SEO and web analytics?"

Answer (be honest — strengthen if you have real examples):

Most of my recent work is **authenticated B2B/enterprise apps** where SEO is less central than **performance and Core Web Vitals**. I still apply overlapping principles: **semantic HTML**, meaningful titles, lazy loading, fast first paint, and **structured routing** for public/marketing pages when they exist.

For analytics, I've integrated **event tracking** for user flows (feature usage, funnel steps, error rates) to help product teams decide what to improve — I'd align with IGS/client conventions (GA4, Tag Manager, or similar).

If you have a public-facing project: Replace with a concrete example — meta tags, SSR/prerender, sitemap, analytics events.

8. Behavioral Questions (STAR Answers)

8.1 "Tell me about a time you worked with cross-functional teams"

Situation	Delivering a new logistics module with backend (NestJS), QA, PM, and mobile team — API contracts changed mid-sprint.
Task	Keep alignment and hit release without skipping critical QA.
Action	Daily 15-min sync, same-day Confluence notes on API changes, sliced frontend into shippable increments, flagged risk early with scope vs timeline options.
Result	Shipped on time, zero P1 bugs; PM cited transparent communication.

Culture link: Agile collaboration and Design Thinking — iterate with stakeholders, don't disappear into code.

8.2 "Describe a complex problem you solved independently"

Situation	Operational dashboard slow to open — too much JS in the initial bundle; users open the app hundreds of times per day.
------------------	--

Task	Improve load time without blocking the feature roadmap.
Action	webpack-bundle-analyzer, lazy routes, splitChunks tuning, buildable Nx libs, removed barrel imports breaking tree-shaking, bundle budgets in CI.
Result	~14% faster TTI, initial JS ~1.9 → ~1.6 MB gzip; operators noticed faster shift-start load.

Culture link: Performance ownership — matches IGS posting emphasis on fast load and smooth interactions.

8.3 "Tell me about a time you failed. How did you recover?"

Situation	Performance optimization on a live data grid caused stale status display under burst updates in staging-like conditions.
Task	Fix before wide release and prevent recurrence.
Action	Rolled back via feature flag, root cause analysis (batching dropped intermediate updates), added test for freshness under burst load.
Result	No user impact in prod; team reused the test pattern for other streaming components.

Culture link: Accountability and quality — no blame, fix and improve the system.

8.4 "How do you handle conflict or disagreement?"

Answer:

I assume good intent and use **data or a time-boxed spike** instead of opinion battles.

Example: A colleague wanted a new state library mid-project. I proposed a **two-day spike** with criteria: bundle size, test complexity, team familiarity. Existing **RxJS + services** won; we documented an ADR and moved on.

That works well in small teams where you can't afford two patterns for the same problem.

8.5 "How do you handle tight deadlines / pressure?"

Answer:

I prioritize by **user impact and risk**:

1. **Must be correct** — auth, payments, data integrity
2. **Must ship** — core user path; negotiate scope with PM early
3. **Nice to have** — polish, secondary views

I communicate **green/yellow/red** status daily when pressure rises. Surprises are worse than bad news delivered early.

8.6 "Tell me about a time you went above and beyond"

Situation	Shared component library had inconsistent grid APIs — each squad wrapped it differently.
Task	Not officially assigned; my team only needed one fix.
Action	Wrote a short RFC, aligned leads, refactored wrapper, added tests and docs, ran lunch-and-learn sessions.
Result	~80% adoption within a quarter; faster feature delivery.

IGS hook: Small team — one senior improving the library lifts everyone's velocity.

8.7 "Tell me about mentoring junior developers"

Situation	Mid-level developer struggled with RxJS memory leaks in long-lived operational screens.
Task	Fix the immediate bug and prevent class of bugs.
Action	Pair-programmed on <code>takeUntilDestroyed</code> , added ESLint guidance for subscriptions, they became reviewer for streaming code.
Result	Fewer leak-related incidents; stronger review culture.

9. Senior-Level & Leadership Questions

9.1 "How do you define and maintain frontend standards?"

Answer:

Document lightly, enforce with automation:

- ESLint/Prettier, PR templates, size limits on PRs
- **Library owners** for shared code reviews
- **ADRs** for significant choices (state management, testing tool)

- **Lead by example** — my PRs follow the same rules

In a growing team like IGS, standards should help juniors contribute safely, not block speed.

9.2 "How do you balance hands-on coding with mentoring?"

Answer:

As a senior IC I aim for **~60–70% hands-on** — architecture, critical paths, shared libs — and **~30–40%** unblocking others, reviews, and design discussions.

I own the **hardest parts** and **set patterns** others follow. If I'm only in meetings, quality drifts; if I'm only coding, the team doesn't scale.

9.3 "How do you experiment with new tools without destabilizing the team?"

Answer:

Spike → **measure** → **adopt or reject** → **document**.

Example: evaluating a new test runner or Angular feature — pilot on one library, compare CI time and developer feedback, then propose team-wide adoption with a migration plan.

Matches IGS's posting: *experiment with new tools to enhance development and product quality* — with discipline.

10. Frontend Standards, Performance & SEO

10.1 "What's your approach to frontend performance?"

Answer:

I split **load performance** and **runtime performance**:

Load: lazy routes, bundle analysis, tree-shaking, cache-friendly vendor chunks, image/asset optimization

Runtime: OnPush change detection, virtual scroll for long lists, throttle/batch stream updates, avoid unnecessary template work

I measure with **realistic data** — not empty-state Lighthouse — because enterprise and content apps behave differently under load.

10.2 "What's your approach to testing?"

Answer:

- **Unit tests:** services, pipes, RxJS logic — fast feedback
- **Component tests:** critical flows, forms, error states
- **Integration tests:** API boundaries with mocked backends
- **E2E (selective):** happy paths for business-critical flows

Bug fixes include a regression test. Shared library code gets **higher coverage** — highest leverage in a modular codebase.

10.3 "What does quality code mean to you?"

Answer:

Correct, readable, testable, and maintainable by someone who didn't write it.

Modular boundaries, typed API contracts, predictable state, clear error handling, and no hidden global side effects. Quality also means **operational readiness** — logging, feature flags, sensible loading states.

11. Digital Content / B2B Product Context

11.1 "Do you have experience in digital content or entertainment?"

If yes: Give a concrete example — streaming, gaming, media CMS, subscription flows, content analytics.

If no (likely — use this):

I haven't worked inside a gaming or streaming company specifically, but I've built **B2B platforms with consumer-grade UX expectations** — insurance quoting, logistics ops, real-time dashboards — where engagement, clarity, and performance matter.

IGS's clients sell **experiences**, not just software. I'd ramp on domain by pairing with product/design, using the product myself, and applying the same frontend discipline: fast interactions, clear states, trustworthy data display.

11.2 "How do you work with designers / Design Thinking process?"

Answer:

I treat design as a **collaborative loop**, not a handoff.

- **Empathize/Define:** Join user discussions or review research summaries when possible
- **Ideate/Prototype:** Build thin vertical slices or clickable flows before full build
- **Test:** Validate with users/stakeholders; iterate without ego

Technically, I implement with **design tokens, reusable components, and responsive layouts** so experiments don't become one-off CSS debt.

11.3 "How do you handle third-party integrations (payments, providers)?"

Answer:

From **Stripe on an insurance platform**: idempotent actions, clear loading/disabled states, reconciliation after redirect, E2E tests for success and failure paths, never trust client-only confirmation.

IGS's backend posting mentions **payment and game providers** — same mindset: **defensive UI, clear errors, authoritative server state**.

12. Work Style, Logistics & Salary

12.1 "What's your preferred work arrangement?"

Answer (align with posting — on-site Solna):

I understand this role is **on-site in Solna**. I'm comfortable with that — I value **direct collaboration** with designers, backend, and juniors, especially in a small growing team. [If

applicable: I'm already in the Stockholm area / I'm prepared to relocate self-funded as an EU citizen.]

12.2 "What's your notice period?" / "When can you start?"

Answer:

My notice period is **[X weeks]**. Earliest start date would be **[date]**. Happy to confirm once we align on offer timeline.

12.3 "What are your salary expectations?"

Stockholm/Solna senior frontend market (2026 reference):

- **Frontend senior:** roughly **SEK 580K–750K/year** base at agencies/SMEs; wider range at large product companies
- **Monthly gross:** often **SEK 58K–78K** for 5+ years experience ([market references](#))
- Similar Solna listings have advertised **SEK 50K–60K/month** + benefits at smaller product teams — IGS may vary as a boutique agency

Answer:

Based on my **10+ years** of senior Angular experience, the **Stockholm/Solna** market, and the scope — architecture, shared libraries, mentoring — I'm targeting **SEK [X]–[Y] per month gross** or **SEK [X]–[Y] annual**, depending on the full package (pension, insurance, vacation, bonus).

I'm open to discussion for the right team and growth path. May I ask what range IGS has budgeted for this role?

Tip: Research [Unionen/Almega IT avtal](#) and Glassdoor before the call. Small agencies may pay below Spotify/Klarna — factor in learning, ownership, and work-life fit.

12.4 "Do you require visa sponsorship?"

See [Section 4](#). Do not dodge this question.

12.5 "Are you interviewing elsewhere?"

Answer:

I'm in **[early / active]** conversations with a few companies in the **frontend / Angular / European product** space. IGS is a **strong interest** because of the **senior scope, Angular architecture, and digital content domain** — I'm prioritizing this process and can move quickly if we're aligned on logistics and compensation.

12.6 "Do you speak Swedish?"

Answer (adjust to your level):

If limited/no: My professional working language is **English — fluent written and spoken**. I'm open to learning Swedish for daily life and basic workplace use, but I'm most effective in English for technical work.

If you speak Swedish: I speak **[level]** Swedish and use English for technical documentation and code — happy to discuss what the team uses day to day.

13. Strengths, Weaknesses & Career Goals

13.1 "What are your greatest strengths?"

Answer:

Platform thinking — shared libraries, modular architecture, standards that scale the team.
API integration depth — frontend plus NestJS/backend awareness; I debug cross-stack issues.
Calm delivery under complexity — enterprise B2B flows, real-time data, performance tuning.

All three map to IGS's senior frontend role: architecture, REST integration, performance, mentoring.

13.2 "What's your greatest weakness?"

Answer:

I sometimes **invest too long in root-cause analysis** when a pragmatic workaround would unblock the team faster.

I've improved by **timeboxing investigation**, communicating options early, and scheduling deeper fixes when appropriate.

13.3 "Where do you see yourself in 5 years?"

Answer:

Still building **high-impact frontend systems** — either as a **staff-level IC** shaping architecture and libraries, or a **tech lead** balancing coding with mentoring.

I want depth in **product-minded frontend engineering** — the kind of work IGS does for content and entertainment clients — and to be someone who makes the **team and codebase** better, not just ships features.

14. Questions to Ask the Recruiter

Pick **3–4** — shows senior interest:

1. *"What product or client project would I join first — is it a greenfield build or evolving an existing Angular app?"*
2. *"How is the frontend team structured today — how many developers, and is there a lead or staff engineer?"*
3. *"What does success look like in the first **6 months** for this senior role?"*
4. *"How do frontend and Java/Spring backend teams collaborate day to day — co-located squads or separate tracks?"*
5. *"What are the **next interview steps** — technical screen, live coding, take-home, system design?"*
6. *"How does IGS apply **Design Thinking** in practice for engineering — are devs involved in user research and prototyping?"*
7. *"Is the work mostly **in-house product** for one client, or multiple client projects in parallel?"*
8. *"What's the team's approach to **SEO/analytics** — mostly internal apps or public consumer-facing sites?"*
9. *"Confirming logistics: the posting says **on-site Solna, no relocation/visa sponsorship** — can you clarify what that means for **[EU / non-EU]** candidates?"*

15. 30/60/90 Day Plan

If asked: "How would you approach your first months?"

First 30 days — Learn

- Set up dev environment, run Angular app(s) and tests locally
- Understand repo structure, shared libs, CI, deployment rhythm
- Meet designers, backend, PM — learn current product and users
- Ship a small bug fix or component improvement to learn PR process

Days 31–60 — Contribute

- Own a medium feature end-to-end (UI + API integration)
- Participate actively in code reviews; learn team conventions
- Identify one friction point (slow build, flaky test, unclear lib API) and propose a fix
- Pair with a junior on a real task

Days 61–90 — Lead

- Drive a **shared library or standards** improvement (lint rule, component API, performance pass)
- Present a short tech share (performance, RxJS patterns, testing)
- Document one frontend convention for onboarding future hires

Framing: *"In a small team I'd ramp on the product and users first — IGS's Design Thinking fits that — then increase architectural influence as I earn trust."*

16. Top 3 Resume Projects — Interview Scripts

Oleh Pliuta — curated for IGS Senior Frontend Developer.

Priority: **#1 Shipment Company** (Nx + libraries + performance) → **#2 Insurance Quoting** (B2B flows + payments) → **#3 Supply Chain Dashboard** (real-time UI).

Which project when?

If they ask...	Lead with...
"Most relevant experience?"	#1 Shipment Company (Nx + enterprise + NestJS APIs)
"Shared libraries / architecture?"	#1 primary, #2 secondary (Nx + NgRx)
"Performance?"	#1 (14% TTI, webpack) + #3 (WebSocket batching)
"REST / backend integration?"	#1 NestJS + #2 Stripe/NestJS
"Complex B2B software?"	#2 Insurance Quoting
"Real-time / engaging UX?"	#3 Supply Chain Dashboard
"Mentoring / quality?"	Ergonized culture — reviews, Playwright E2E, 20% fewer prod bugs

Project #1 — Enterprise Vessel Logistics Platform (Shipment Company)

Period: Dec 2022 – Mar 2025 · **Role:** Senior Front-End Developer · **Remote**

Why for IGS: Modular Angular, **Nx shared library**, REST/NestJS integration, performance, mentoring-scale patterns, enterprise users who live in the app daily.

30-second pitch

At Shipment Company I built the frontend for an enterprise logistics platform — web and Android — for **1000+ users** and thousands of daily operations. I designed modular architecture, contributed to an **Nx monorepo shared library**, integrated **NestJS APIs**, and cut load times by **14%** through webpack and lazy-loading work.

Complicated moment — Shared library divergence (pick for "architecture" questions)

Problem	Web needed complex grids; mobile needed simplified views. Teams forked components instead of using the shared lib.
Your move	Split presentation vs feature libs ; Nx boundary tags; adapters — same data model, different UI shells.
Result	Less duplication, faster delivery on both platforms.
IGS hook	<i>"Same as a growing agency — one Angular codebase, multiple surfaces, shared standards."</i>

Complicated moment — Webpack / 14% performance (pick for "performance" questions)

Situation	Dashboard TTI ~4.2s; heavy code in main bundle.
Action	Lazy routes, splitChunks, buildable Nx libs, dynamic imports, bundle budgets in CI.
Result	Initial JS 4.9 →1.6 MB gzip; TTI 4.2 →3.6s (~14%).
IGS hook	<i>"IGS asks for fast load and smooth interactions — this is how I deliver that measurably."</i>

Project #2 — B2B Insurance Quoting Platform (Ergonized)

Period: Nov 2017 – Nov 2022 · **Role:** Senior Front-End Developer · **Kyiv**

Why for IGS: B2B enterprise, multi-step UX, **REST + NestJS**, **Stripe** payments, NgRx, Nx — high-stakes flows similar to client products in regulated/commercial domains.

30-second pitch

B2B insurance quoting in **Angular, Nx, NgRx, NestJS**, with **Stripe** payments — multi-step wizard flows, complex validation, shared libraries. I did reviews, mentoring, and **Playwright E2E** on critical paths.

Complicated moment — Stripe edge cases

Problem	Payment succeeded in Stripe but UI showed failure on slow networks (or vice versa).
Your move	Idempotent intents, loading states, reconciliation on return, E2E for success/failure.
Result	No double-charges; fewer support calls.
IGS hook	<i>"Entertainment and content products also have irreversible user actions — same careful UX."</i>

Project #3 — Supply Chain Visibility Dashboard (Ergonized)

Period: Nov 2017 – Nov 2022 · **Role:** Senior Front-End Developer · **Kyiv**

Why for IGS: Real-time, engaging dashboard UX — live updates, performance under stream load, consumer-grade feel in a B2B ops tool.

30-second pitch

Supply chain dashboard in **Angular 14** with **WebSockets** and **Google Maps** — live asset tracking. I owned stream handling in RxJS and kept the UI responsive when hundreds of events arrived per minute.

Complicated moment — WebSocket burst → UI jank

Problem	Map and list re-rendered every tick; browser froze.
Your move	<code>auditTime</code> / <code>bufferTime</code> , <code>OnPush</code> , incremental marker updates, connection state badge.
Result	Smooth interaction during peak updates; users trusted connection state.
IGS hook	<i>"Digital content apps also need smooth live UI — separate ingestion from render cadence."</i>

17. Pre-Interview Checklist

- ☐ Re-read [job posting](#); highlight Angular, libraries, performance, mentoring, SEO
- ☐ **Resolve logistics story** — on-site Solna, no sponsorship ([Section 4](#))
- ☐ Prepare **5 STAR stories**: cross-team, independent problem, failure, mentoring, above-and-beyond
- ☐ Review [Section 16 — Top 3 Projects](#)
- ☐ Skim [IGS website](#) — Design Thinking, digital content focus
- ☐ Customize **Tell me about yourself** (90 sec) and **Why IGS**
- ☐ Prepare **salary range** in SEK, notice period, start date, work authorization
- ☐ Prepare **3–4 questions** for recruiter
- ☐ Test video/audio if remote screening; quiet space, resume open
- ☐ Optional: check IGS LinkedIn for recent hiring posts (team growth signal)

18. Closing Statement

When they ask: "Anything else?" or end of call:

Thank you for the conversation. I'm genuinely interested in IGS — the combination of **Angular architecture work**, a **growing team** where seniors shape standards, and **digital content products** with a user-centered process matches what I'm looking for. I'd welcome the opportunity to continue to the next stage.
