Frontend Engineer (Angular) — RE Partners

I am a senior Angular/TypeScript developer with **10+ years** of experience and **30+** delivered web and mobile applications across fintech, healthcare, logistics, and e-commerce. I am applying for the Frontend Engineer (Angular) role at RE Partners because the position aligns closely with the kind of enterprise front-end work I have been doing for years: scalable architecture, strong API integration, and reliable delivery in regulated environments.

Alongside frontend work, I have solid backend experience with Node.js and NestJS — designing APIs, working with DTOs, auth flows, and service layers. That background makes it much easier for me to read Java API documentation, understand backend contracts and error handling, and troubleshoot integration issues without relying entirely on backend support.

Based in Croatia, I am available for remote work in a Poland-friendly time zone and would be glad to discuss how my experience can support RE Partners' frontend team.
